VentureTech invests RM10m in robotic solutions firm

CYBERJAYA: VentureTech Sdn Bhd has invested RM10 million in SS Rover Sdn Bhd, an underwater remotely operated vehicle (ROV) solutions provider in Malaysia, to accelerate the development and deployment of the latter's cutting-edge teleoperated system and integrated digital twin fleet system.

SS Rover is a homegrown technology company specialising in engineered services, products, and robotic solutions for the offshore oil and gas, energy, telecommunication, and underwater civil infrastructure industries.

Today, SS Rover stands at the forefront of delivering state-of-the-art engineered services and robotic solutions to its diverse clientele.

This strategic partnership will empower SS Rover to refine its teleoperated system, enhancing operational efficiency and expanding its capabilities.

Additionally, the investment will drive the development of the groundbreaking integrated digital twin fleet system, which holds the potential to revolutionise underwater operations.

"We are thrilled to support SS Rover's visionary approach to revolutionising underwater operations," VentureTech CEO Ahmad Redzuan Sidek said.

"Their expertise and innovative solutions align with our mission to foster technological innovation and empower high-potential bumiputera companies in the technology sector.

"We firmly believe that SS Rover's advanced underwater robotic solutions will have a profound impact on the offshore oil & gas, energy, telecommunication, and utilities industries, and we are eager to embark on this journey of growth together."

With VentureTech's support, SS Rover founder and managing director Syamsul Nizam Azmee said they are well-positioned to establish leadership in underwater ROV and pioneer significant advancements in the industry.
